

What_if

healthcare and education
are available for
the underprivileged as well.

we simulate
a welfare system

IT'S AN APP

[TESTING . REGION]

WHERE?

A slum e.g. in India or any other region where basic healthcare, education, infrastructure, and access to internet are available.

1

RECIPIENT

[SIDE]

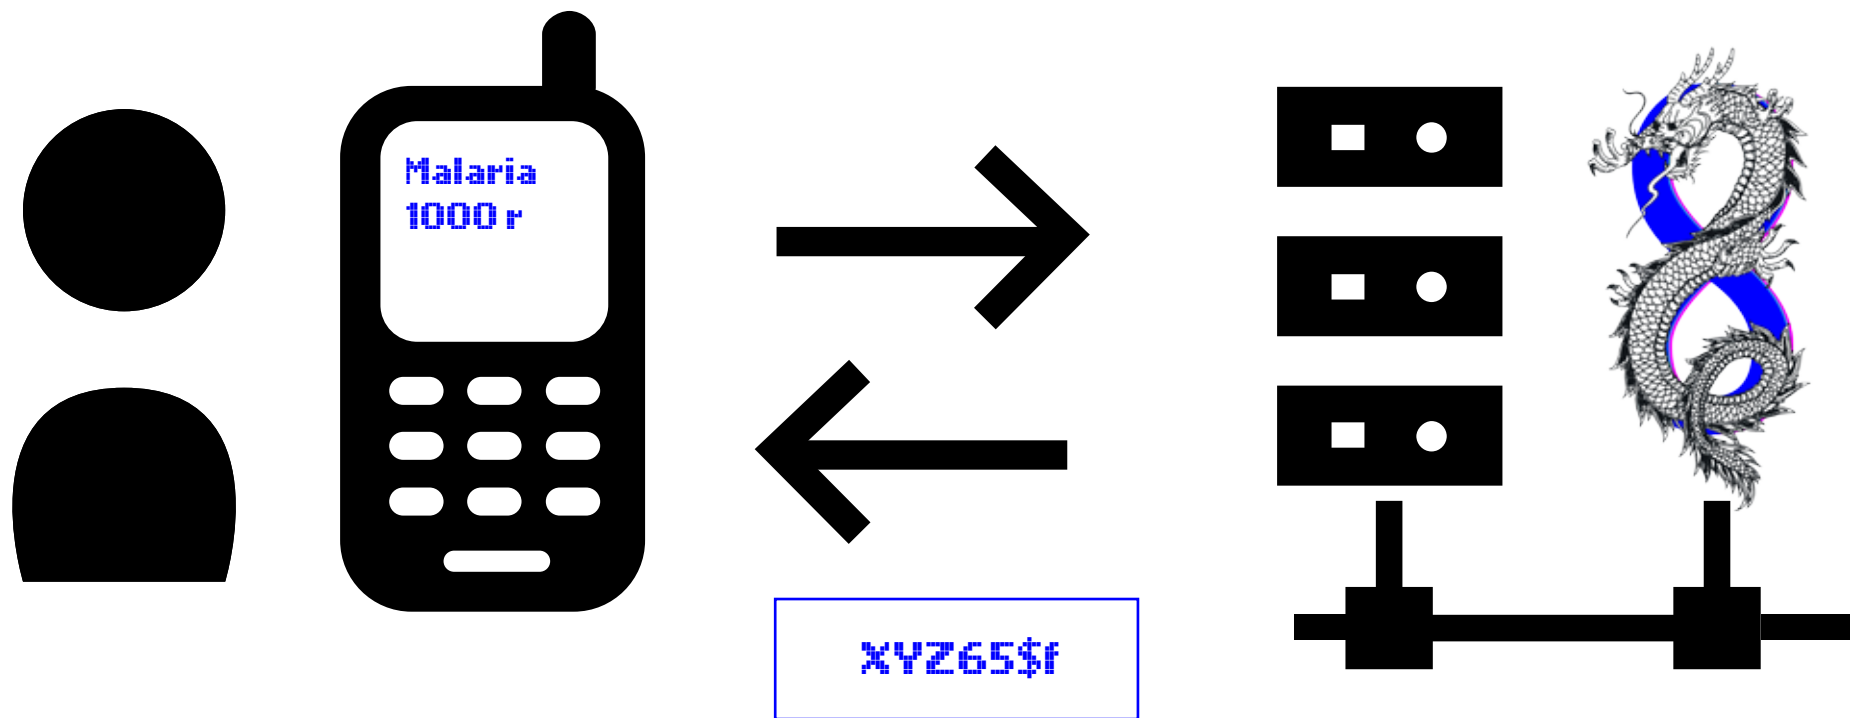

1 RECIPIENT

Anyone in the testing.region who requires a health-care or educational service can send a SMS to the previously promoted un_debit.number (local number).

The SMS contains two basic types of information:

- The first line informs us about the purpose of the request: Healthcare (Malaria, Diarrhea etc.) or Education (primary school, kindergarden etc.)
- The sum of money required.

After the system has filed the request the recipient receives an SMS with an unique transaction code (sexy! encryption).

XYZ65\$f

The recipient takes the code to an institution which needs to be registered in and approved by the un_debit.network.
(> see #2 institution)

After the unique transaction code has been verified by the institution, the recipient receives the required service as well as a SMS with a confirmation request from the system.

To conclude the transaction, the recipient must confirm the reception of the required service by answering this SMS.

DID WE
HELP?

After the service has been successfully delivered, the recipient receives a SMS with a (feedback) questionnaire:

Gender + Age of the recipient(s)
Did we help? >> Answer with an emoticon

S/he has 6 days to answer the questions and send the questionnaire back to the system in order to remain eligible for further transactions.

2

INSTITUTION

[SIDE]

[THE REGISTRATION PROCESS]

2 INSTITUTION

! Important ! Any institution which wants to collaborate first must register. There are two ways to do so:

1. The institution registers itself through a web form or app.
2. Users can identify and suggest institutions via sms or app. After an user identifies / suggests an institution, the institution gets an invitation form to register.

3. The institution then needs to provide all the necessary information for us to verify its legal status.

By confirming that the information provided is correct, and conducting a contract with ungeheuer.unltd, the institution is legally obligated and receives capacity to act within the un_debit.network.

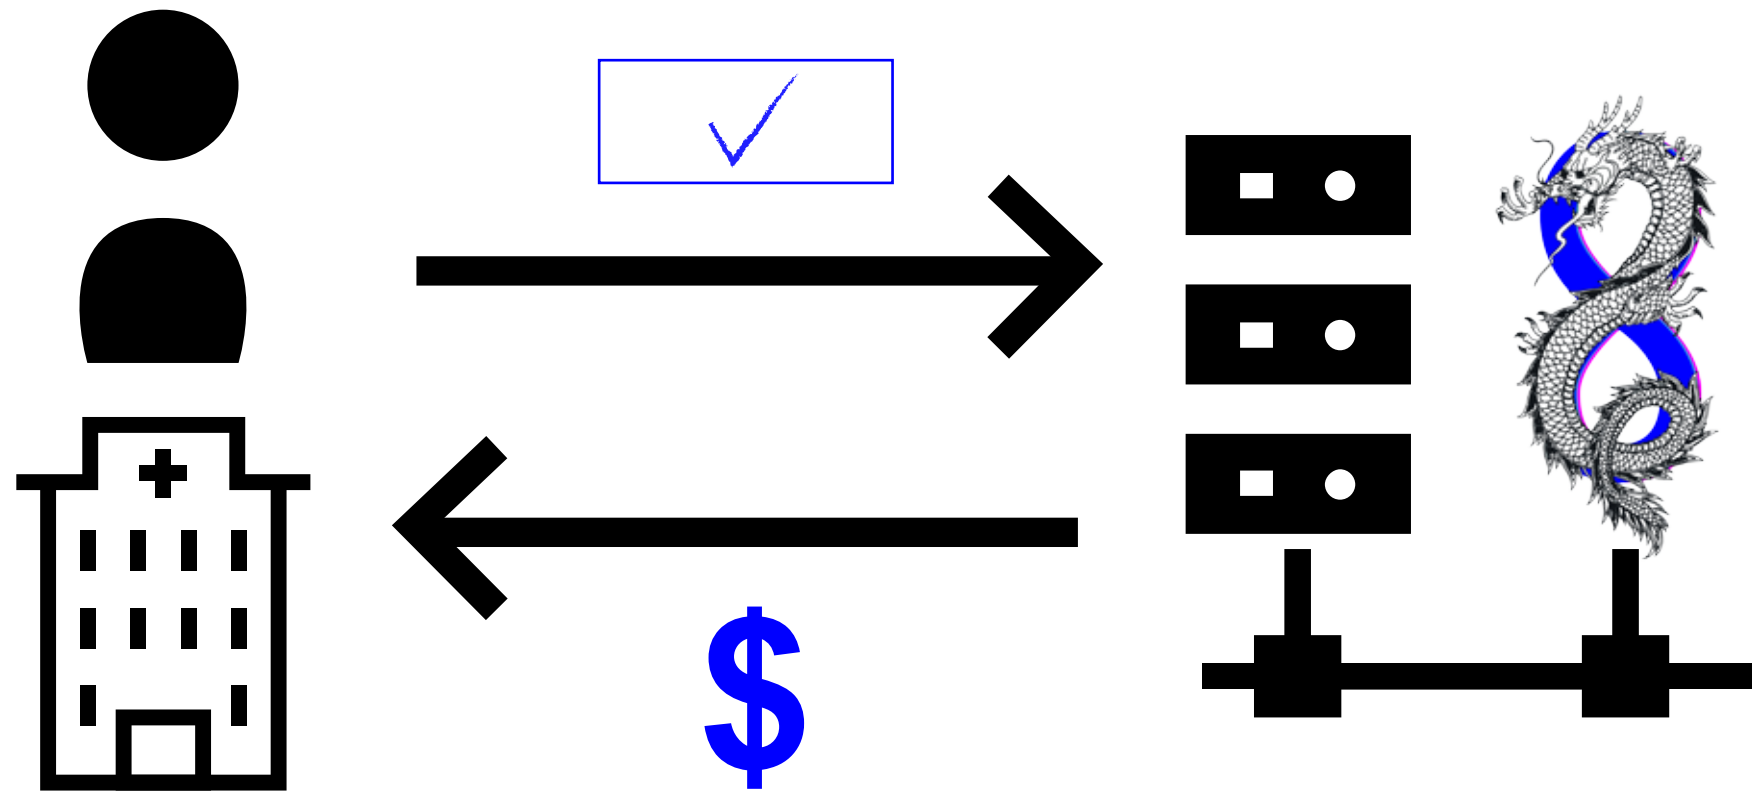

[THE TRANSACTION PROCESS]

#2 INSTITUTION

1. After having been presented the unique transaction code, the institution sends it to the `un_debit.number`.

2. Once the code is verified by the system, the institution receives a confirmation SMS where it is being asked to release the service in question.

3. After the service has been delivered to, and confirmed by the recipient, the system releases the payment to the institution.

#3 DONOR

We want to keep the barriers of participation as low as possible, encouraging users to experiment before they make a commitment. Thus, the donor has the option to play around with the different types of tokens before the log in. Only when s/he has decided upon which kind of donation to make a registration is necessary.

The donation process offers the opportunity to choose between several tokens:

STANDARD.TOKEN

- > single donation of 1€
- > fast, unbureaucratic, anonymous*
- > valid for all projects
- > will be redistributed according to the first-come-first-serve principle

*when activated as a SMS.token without log in

CHARGED.TOKEN

- > can be charged according to the resources available to the donor
- > valid for all projects
- > will be redistributed according to the first-come-first-serve principle as well

CUSTOMIZED.TOKEN

- > can be customized by cross-selection of different values
- > e.g. frequency of donation, purpose, region, charge of payment, specific or non/specific purpose.

SUPER.TOKEN GIMMICK

This token is charged with projects which are almost funded / most pressing / last minute => random principle;
